

The Future We Want

Available Visuals

The FWW project will make creative use of state-of-the-art computer animations and videos to depict what homes, other buildings, streets, neighborhoods, cities, rural areas, transportation systems, energy systems might be like in a low-carbon sustainable society. The following are examples of computer animations available for use in *The Future We Want* exhibit and web site. In addition, the FWW team will produce a variety of original computer animations and videos with technical assistance from leading sustainable development experts:

Imagine KC - Light Rail Transit Video - Produced for Kansas City Public Television and the Mid America Regional Council as a way to explain that Light Rail is not just about moving people, but how pedestrian friendly developments are created around station locations, making light rail a catalyst for positive change in the community. <http://www.vimeo.com/4360553>

Vela Marketing Video – Produced for a Dallas developer to show how high-density urban housing can be made attractive. This video is an example of how real people can be composited them into computer animations – a technique FWW will use to incorporate well-known figures into its depictions of the future.. <http://www.vimeo.com/3502174>

Mixed-Use Real Estate Demo Reel - This video is a compilation of the urban infill / mixed-use real estate projects be Arnold Imaging, a key FWW partner. <http://www.vimeo.com/2113367>

Greening of Manchester, UK: An animation produced by the global development firm ARUP. <http://www.climateactionproject.com/video/ManchesterRetrofit> (c) Arup.mp4

Ultra Transit at Heathrow: <http://www.ultraprt.com/cms>

See additional visual and written materials for possible use in the FWW project at www.climateactionproject.com/envision.php.
